**Elevation Network Adaptor**

**Installation Instructions**

**Items Supplied**
- Network Adaptor
- 6 Pin Cable
- Terminal Resistor Blocks (x2)
- Serial Number Label

**Tools Required**
- Hobby Knife
- Small Screwdriver
- Long Nose Pliers
- Wire Stripper

**Serial Number Label**

**DATE:** DD/MM/YY  
**NUMBER:** 0123456789

**IMPORTANT:** Ensure the Serial Number is noted on the back of the Keypad User Guide. This will be used for the programming of the Key/Control System.

1. **Dip Switches**

   Important: Network Adaptor must be installed internally, e.g. in a wall or roof cavity.

   Ensure that dip switches are all in the down or off position as shown. This is the default position.

2. **Cut down both the vertical lines and snap out the tab.**

3. **Insert 6 pin connector**

   **Network and Power**

   **Rain Sensor or Wall Switch**
Wall Switch Circuit Diagram
(Note: For Keypad Circuit Diagram see Keypad fitting instructions)

TROUBLE SHOOT GUIDE

- How many devices can I run on a ‘network’?
The network can handle 30 devices. Each Actuator acts as one device, each Network Adapter also acts as one device. The use of synchronisation of two actuators only counts as one device. The slave Actuator is not connected to the network.

- Can I use two operators on one window?
Yes. The Synchronisation Loop (purchased separately) is required for two Actuators on one window. The slave Actuator is not connected to the network.

- Does the power have a polarity input?
The system allows for the power loom to be inserted in either terminal. No Polarity input.

- What is the largest sash size for one Actuator?
We recommend that the maximum sash width of 300mm and maximum weight of 30kg for one Actuator. A maximum sash width of 1800mm for two Actuators. Please refer to the web-site for additional information.

- Can I use more than one Rain Sensor?
Yes. You can use up to four Rain Sensors on the one network.

- Can the Rain Sensor control individual windows?
No. The Rain Sensor will control all the windows on the network. This however can be achieved with a Keypad

- Will all the windows close when the Rain Sensors detect rain?
Yes.

- Will my windows re-open automatically once the rain has stopped?
No. You will have to press the open button to re-open the windows after the rain has stopped. However, this automatic re-open function is available on a Keypad network.

- Can you override a Rain Sensor that has closed the windows?
Yes. However the Rain Sensor will not re-activate until it has dried and reset.

- 3rd Party Control System Connectivity
“Smart Home” applications are NON-STANDARD and require particular features to operate with this system. Replace all switch connections with two relays. Follow basic function steps to activate and control the system. Ensure activation time is at least two seconds.

GENERAL NOTES:
1. Cat 6 Twisted Pair Network Cable recommended to be used. 2. A maximum of 30 devices per network. 3. Maximum network cable length 300m.
4. A maximum of 30 devices can be assigned to one network, each Actuator, and Network Adaptor counts as a device, eg. 28 Actuators and 2 Network Adaptors can be placed on one network. 5. A maximum of 4 Network Adaptors per network. 6. Place Switch as close as possible to the Network Adaptor.

CALIBRATION AND BASIC FUNCTION:
The system must calibrate before use. Power up the system, wait one minute, then press the open switch. The windows will open and close twice. Wait at least one minute before operating the system.

WALL SWITCH BASIC FUNCTION:
Press the open switch for at least 2 seconds to open the windows. Press the close switch for at least 2 seconds to close the windows. Press any switch for at least 2 seconds to stop the windows, if window is closing or opening.
